Resolve.

DOCUMENTATION LIBRARY / 00

Documentation index

PDF-only submission library

A reading guide to technical architecture, implementation, database design, API, setup, user workflows, testing, operations and engineering history.

COMPILATION DATE

12 November 2026

Source chapters retain their recorded dates and validation scope. Local, simulated and account-backed evidence are distinguished. This volume does not report a new production acceptance run.

Resolve documentation library

This package contains PDFs only. Source code, credentials, databases, Markdown, videos and generation scripts are excluded. Application source remains a separate delivery.

PDF reading order

PDF	Contents
00 Documentation index	Reading guide and final document inventory.
01 Technical architecture	System overview, architecture, workflows and quick setup.
02 Implementation guide	Backend services, reconciliation, execution, AI, aftercare and SDK.
03 Database design	Complete SQLite field dictionary, keys, constraints, indexes and migration catalog.
04 API reference	All current OpenAPI operations, parameters, responses and component schemas.
05 Installation and deployment	Component setup, example configuration, identity and hosted readiness.
06 Illustrated user manual	Existing 51-page merchant/buyer manual and SDK appendix.
07 Testing and security	Recorded tests, account-backed evidence, controls and remaining gaps.
08 Operations and integrations	Customer workflows, provider integrations, Postman and application inventory.
09 Engineering log	Full maintained development history, decisions and validation.

Reviewers should start with the technical architecture and illustrated manual. Developers can then follow the implementation, database and API references. Use installation/deployment with the separately delivered application source. The engineering log retains the reasoning and explicit corrections behind changes.

Edition and evidence

Compiled on 12 November 2026. The illustrated manual retains its 11 November edition and original screenshots. The architecture guide is the 12 November submission edition. Other source chapters retain their recorded dates and scopes.

The API reference describes the current 178-operation contract. The older audit ledger covers 175 operations; that result does not establish new coverage of all current routes. Recorded application tests were not rerun for these PDFs. PayPal demonstrations use Sandbox test funds. AI recommendations remain separate from merchant authorization and payment execution.

The database inventory uses a new disposable SQLite database initialized from immutable migrations. It does not access the owner's database or prove hosted PostgreSQL acceptance. Historical local, simulated and account-backed results are identified separately in the testing/security and engineering volumes.

Package checks

The archive contains exactly the ten named PDFs. The build verifies readable PDFs, final page counts, ZIP CRC integrity, matching document hashes and the 35,000,000-byte submission limit. Final page counts appear in this PDF index.

Final PDF inventory

The archive includes this index plus the nine volumes below, in the numbered reading order.

Document	Pages	File
Technical architecture	14	01_Technical_Architecture.pdf
Implementation guide	31	02_Implementation_Guide.pdf
Database design	66	03_Database_Design.pdf
API reference	137	04_API_Reference.pdf
Installation and deployment	35	05_Installation_and_Deployment.pdf
Illustrated user manual	51	06_Illustrated_User_Manual.pdf
Testing and security	45	07_Testing_and_Security.pdf
Operations and integrations	51	08_Operations_and_Integrations.pdf
Engineering log	145	09_Engineering_Log.pdf
